BACTERIAL PATHOGENESIS

POSTDOCTORAL FELLOW position is available immediately to join the collaborative research group of Dr. Helene Andrews-Polymenis studying Salmonella pathogenesis. Selected individual will be primarily responsible for conducting independent research on Salmonella pathogenesis and publication of results. Our research emphasizes determination of the genetic requirements for virulence and persistence in a variety of host models, as well as molecular and biochemical characterization of virulence determinants. Ph.D. required and a record of productive experience in molecular biology of bacterial pathogens preferred. Send cover letter, curriculum vitae and names and addresses of three references postmarked by November 15, 2009 (or until a suitable candidate is found), to:
