

Postdoctoral Positions

VIROLOGY AND IMMUNOLOGY

Penn State University College of Medicine, Hershey

Postdoctoral positions are immediately available with support from a NIH Training Grant entitled "Viruses and Cancer", which was recently funded by the National Cancer Institute. The research programs funded through the training grant are associated with the Department of Microbiology and Immunology at the Penn State College of Medicine in Hershey, PA. This training program represents an excellent opportunity for a productive research experience within a highly collegial scientific environment. The Department's highly interactive group of virologists and immunologists has research programs focused on hepatitis B virus, herpesviruses, papillomaviruses, polyomaviruses, and retroviruses. Research programs in immunology include studies in tumor immunology, autoimmunity, antigen presentation, initiation of antiviral immunity, and stress-induced immune modulation. The Department has abundant peer-reviewed funding and strong graduate and postdoctoral training programs. We are seeking applicants with a Ph.D. or M.D./Ph.D. who have research experience in molecular and cell biology, biochemistry, virology, and or immunology. Excellent research facilities, strong departmental and interdepartmental research training programs, excellent institutional core facilities all contribute to the productive research environment within the Department.

Applicants (*U.S. citizen/permanent resident status required for these T32 positions*) should email a curriculum vitae as well as names of three references to:

Ms. Billie Burns

Administrative Coordinator

Department of Microbiology and Immunology H107

Penn State University College of Medicine

500 University Drive, Hershey, PA 17033
